

# SIMONS SEARCHLIGHT

Simons Searchlight is a research program that is creating an ever-growing database and resource network for rare genetic neurodevelopmental disorders. Jordan's Guardian Angels has partnered with Simons Searchlight to help build the database for individuals with Jordan's Syndrome.

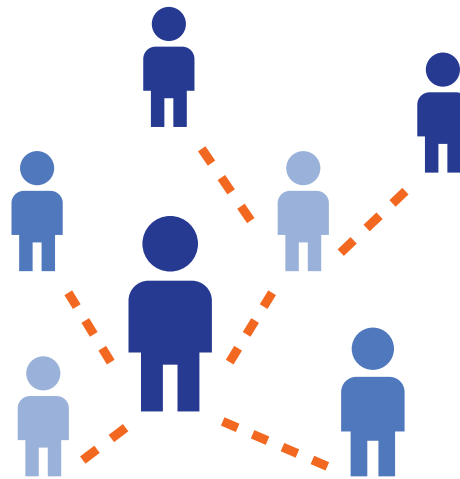

Simons Searchlight collects information and blood samples from our families, anonymizes the data, and makes it available to the clinical and research community.

## SIMONS SEARCHLIGHT

1. There is a **lack of understanding** and research when it comes to rare diseases. Together, we can make a change!

2. By **joining Simons Searchlight**, you are painting the picture of what it means to have Jordan's Syndrome and guiding our research team to find treatments and cures.

3. **Our community plays a critical role in our journey to a treatment and a cure.** Our research effort starts with us through data and samples collection and ends with us through clinical trials!
